

# Boxit®

The Boxit 5 Series is a waterproof mobile phone case. It protects your mobile phone against water, snow, shocks, sand and dirt, simultaneously enabling normal use, both talking and dialing, through the case.

Not only is the Boxit **compact** and distinctive in design, but its features are also **unique**. Boxit is the only product of its class that uses a **GoreTex Audio Membrane** to ensure good sound audibility whilst being 100% waterproof, and uniquely breathable. So you won't get condensation and moisture building up from inside the case on a humid or damp day, that's something that no other product in the market has to offer.

## Waterproof Case

The Boxit 5 Series case has been given IP67 protection classification, which means that the case provides complete protection from dust and moisture up to 1m deep. When closed correctly, the case provides moisture protection up to 1m deep for 30 minutes.

The protection level of each case is checked prior to packaging.

## Customization:

The Boxit 5 Series can be customized, images illustrate several possibilities.
